GREEN SHIELD PEST CONTROL CORNER

Pest Control Corner - March 2019

Welcome to the Pest Control Corner e-newsletter for Green Shield Certified Members! Every month, we send you news on pest control research and technology, industry updates and green pest management tips. Have any news of your own you'd like to share with other Green Shield members? Feel free to send your information or updates to info@greenshieldcertified.org.

The Most Troublesome Household Pests in Each State

[Organic Lesson](#) published a new study that found the most troublesome household pests in 2018 were **flies, ants and mosquitoes**. The study analyzed Google searches containing DIY pest control keywords such as "bed bug remedies" and "how to get rid of fruit flies." See the full study here: [The Most Troublesome Household Pests in Each State \(2018\)](#).

What are the most troublesome pests in the households you service?

A New Kind of Mosquito Repellent

New research from the University of Wisconsin-Madison describes the first mosquito-repelling compounds to be derived from the bacterium, *Xenorhabdus budapestensis*.

Read more about the groundbreaking research here: [A new kind of mosquito repellent that comes from bacteria.](#)

The Future of Green Cleaning

Green cleaning is often intertwined with green pest management. So what is next for the green cleaning industry? A new article from Environmental Protection explores the future of the green cleaning industry. Read the full article here: [Green Cleaning: Where We've Been and What's Next.](#)

Using Limited Resident Prep for Bed Bug Treatment

A new webinar from the Healthy Homes Training Center challenges the traditional thought that extensive preparation is necessary to control bed bugs within a home. The free, one-hour webinar was held on January 29th and can be viewed anytime online here: [Healthy Housing Solutions](#).
